

COMPOSITION OF PANCREATIC JUICE

- **General Composition :—**

- **Water** : 99.5%
- **Solids** : 0.5% (*Organic and Inorganic substances*)

STRUCTURAL BREAKDOWN

BICARBONATE CONTENT

- **Bicarbonate content is very high** in pancreatic juice:
- **In pancreatic juice** : $\approx 110\text{--}150\text{ mEq/L}$
- **In plasma** : $\approx 24\text{ mEq/L}$
- **High Bicarbonate Content is Important for 2 Reasons :—**
 - a. **Makes the juice highly alkaline** : Protects the intestinal mucosa from acid chyme.
 - b. **Provides optimal pH (7 – 9)** : Necessary for the activation and functioning of pancreatic enzymes.
