

Anatomy Paper 2 (Reasonings)

1. What is direct and indirect inguinal hernia? Explain the anatomical basis of inguinal hernia?
2. Femoral hernia is more common in female.
3. What is caput medusae? Which are the sites of portocaval anastomosis?
4. Why does portal hypertension produce caput medusae? Enumerate the sites of portocaval anastomosis.
5. Explain anatomical basis of Caput Medusa, Hemorrhoids in Portal Hypertension.
6. Which is the preferable site of Thoracocentesis or pleural fluid tapping? Write anatomical basis of it.
7. Pleural tapping is done in which intercostal space? Why?
8. Which is preferred site for pleural tapping and why?
9. What is the common site of intramuscular injection in gluteal region? Why?
10. Which is site of Intramuscular Injection in Gluteal region and why?
11. Explain the anatomical basis of varicose veins in the lower limb.
12. Define varicose veins. Why are they more common in the lower limbs than in the upper limbs?
13. Foot drop occurs after fibular neck fracture.
14. Give anatomical basis of Foot drop.
15. Injury to neck of fibula results in foot drop.
16. Why is renal colic pain radiate from loin to groin?
17. What is renal colic? Give the anatomical basis of referred pain renal colic.
18. Why is the femoral neck liable to avascular necrosis after fracture?
19. Why is avascular necrosis common after fracture of neck of the femur? Enumerate the blood supply of the neck of the femur.
20. Why is cardiac pain commonly referred to the left shoulder and medial side of the left arm?

- 21.** Why is pain of angina pectoris commonly referred to the left shoulder and medial side of the left arm? Enumerate the branches of the arch of the aorta.
- 22.** Why is the lesser curvature of stomach a common site for peptic ulcer? List the parts of the stomach.
- 23.** Which is commonest site of Gastric Ulcer in Stomach? & why.
- 24.** Pain of appendicitis shifts to right iliac fossa.
- 25.** Why is the Dorsalis pedis artery is clinically important?
- 26.** Why does mediastinal shift occur in tension pneumothorax?
- 27.** Define the pouch of Douglas. Why is it clinically important?
- 28.** Define greater omentum, explain why it is called the “policemen of the abdomen”.
- 29.** Why is the left recurrent laryngeal nerve more prone to injury?
- 30.** What is ectopia vesicae? Write its embryological basis.
- 31.** Explain the anatomical basis of varicocele. Which side is a varicocele common on, and why?
- 32.** Justify the statement: The diaphragm acts best as a muscle of respiration in a recumbent supine position.
- 33.** Anatomical basis of sleeping foot.
- 34.** What is positive Trendelenburg’s sign? Write its anatomical basis.
- 35.** Explain: Bronchopulmonary segments are not bronchovascular segments.
- 36.** Why is medial meniscus more commonly injured than the lateral meniscus? Describe the menisci of the knee joint.
- 37.** Why is the Sternal Angle considered an important surface landmark? Mention the structures lying at the level of the Sternal Angle of Louis.
- 38.** What is Automatic reflex bladder? Give the anatomical basis of the symptoms present in this condition?
- 39.** A 20 years old boy, on his first day at GYM, went for vigorous leg exercise, for 3 hours. On next day he felt severe pain in his lower limbs with swelling in leg compartments. What might be the probable cause? What is the anatomical reason for symptoms seen in the above case.

- 40.** A 30 years old professional cyclist, visited to the OPD for the complaint of chronic pain in buttock region. Pain was increased severely in last 4-5 days. What can be the most probable reason? Give the anatomical base of pain in the buttock in this case.
- 41.** What is Coarctation of aorta? What is the anatomical basis of the symptoms seen in the condition?
- 42.** Define Mediastenal Syndrome
- 43.** In case of extravasation of urine, it cannot enter into ischio-rectal fossa or thigh.
- 44.** Hip joint is more stable than shoulder joint
- 45.** Carina is considered as a last line of defense in respiratory tract
- 46.** In case of superior vena cava obstruction before entry of azygous vein, azygous vein become the main channel for venous drainage of upper half of body
- 47.** Which is the common site of intramuscular injection in gluteal region? Why?
- 48.** What is Thoracic inlet syndrome? Explain its anatomical basis.
