

Anatomy Paper 1 (Reasonings)

1. Name the components of the corpus striatum and Explain the anatomical basis of Parkinsonism.
2. Why do patient with Parkinson's disease develop resting tremors and rigidity? Mention the parts of the lentiform nucleus.
3. Explain how the carcinoma of breast spreads to vertebrae and brain.
4. Explain the anatomical basis of peau d'orange appearance of skin and retraction of nipple in case of breast carcinoma.
5. Explain the anatomical basis of a high incidence of the formation of submandibular stones. Mention two investigations used to diagnose submandibular stones.
6. Why is the pain during meal a characteristic feature of submandibular gland calculi?
7. Explain anatomical basis of instability of the shoulder joint.
8. Why is the shoulder joint most frequently dislocated joint in the body? Describe the attachments of the capsule of the shoulder joint.
9. What are the neurological signs and symptoms of medial medullary syndrome?
10. Explain the anatomical basis of symptoms of Medial medullary Syndrome.
11. Which are tributaries of Cavernous sinus? Give anatomical reasons for cavernous Sinus thrombosis.
12. State the reason- Neglected infection in dangerous area of face of a patient led to cavernous sinus thrombosis. Mention anatomical basis of complications arising from the structures related to the thrombosed sinus.
13. What is Bell's palsy? Explain anatomical basis for it.
14. Facial nerve injury causes inability to close eye.
15. A 15 years old boy came with the complaints of pain in ear, tongue and pharynx. On examination the boy was diagnosed with otitis media of ear. Tongue and pharynx were normal. What is the reason of referred pain in the above case?

16. Severe throat infections can cause pain in the middle ear.
17. A mid-shaft fracture of the humerus results in "wrist drop".
18. Anatomical basis of Wrist drop in radial nerve injury.
19. A pituitary tumor often causes bitemporal hemianopia.
20. Pituitary tumor causes bitemporal hemianopia.
21. Name the parts of the internal capsule. Why does rupture of Charcot's artery produce contralateral hemiplegia?
22. Why does a pulp space infection produce throbbing pain?
23. Define Goitre. Explain the anatomical basis of pressure symptoms produced by goitre.
24. What is preferable site of lumbar puncture? Write about its anatomical basis.
25. Why do lesion of the cerebellum cause ataxia? Mention the functions of the cerebellum.
26. Explain the anatomical reason for various symptoms in carpal tunnel syndrome.
27. Why are foreign bodies more likely to lodge in the piriform fossa? Describe the boundaries of the piriform fossa.
28. Why does injury to the oculomotor nerve cause ptosis and diplopia? Enumerate the muscles supplied by the oculomotor nerve.
29. Why ulnar nerve called as "musician's nerve"? Enumerate the muscles supplied by the ulnar nerve in the hand.
30. A two years old child was brought by the parents for the complaint of delayed speech. On examination the child was unable to extend the tip of the tongue beyond the lips. What will be the most probable diagnosis? give its embryological basis.
31. What is Crocodile tears syndrome? What is the anatomical basis of symptoms seen in the syndrome.
32. What is Hydrocephalus and What is the anatomical basis of symptoms seen in the condition?
33. Define Claw Hand. Give the anatomical basis of symptoms of claw hand.
34. What is Tennis Elbow? What is the anatomical reason for various symptoms.

- 35.** Explain the anatomical basis of spina bifida. Enumerate various types of Spina bifida.
- 36.** A newborn baby was found to have cleft palate with nasal regurgitation of milk during breast feeding. Explain the congenital defect from your anatomical knowledge.
- 37.** What is tuning fork deformity of wrist? Write anatomical basis of it.
- 38.** IM injection given in deltoid almost in the middle of muscle. What complication occurs if given at other site?
- 39.** The median cubital vein is the preferred choice for intravenous access and venipuncture.
- 40.** Occlusion of the posterior inferior cerebellar artery (PICA) leads to dysphagia and hoarseness.
- 41.** Winging of scapula in long thoracic injury.
- 42.** Why is middle ear infection likely to spread to the mastoid air cells.
- 43.** In a lesion of the right hypoglossal nerve, the protruded tongue deviates to the right side.
- 44.** Explain the anatomical basis of incision of neck bleeds freely when cut is superficial.
- 45.** What is safety-valve haematoma of scalp and explain the anatomical basis of it.
- 46.** Explain anatomical basis of Erb's palsy.
- 47.** Explain the anatomical basis of motor aphasia.
- 48.** Explain the anatomical basis of pontocerebellar syndrome and its clinical features.
